ABOUT

Web developer skilled in React, JavaScript, HTML, CSS, Tailwind CSS, and DaisyUI, with hands-on experience turning Figma/Penpot designs into responsive, deployed production UIs. Comfortable with REST API integration, component-based architecture, and state-driven UI logic. Brings strong analytical thinking and attention to detail from a full-time engineering role, plus a track record of independently shipping complete frontend projects.

SKILLS

- **Programming Languages:** JavaScript (ES6+), HTML5, CSS3
- **Frontend:** React.js, Tailwind CSS, DaisyUI, Responsive Web Design
- **Design Tools:** Figma, Penpot (UI/UX prototyping & design handoff)
- **Tools & Workflow:** Git, GitHub, Vite, npm, REST API Integration, Netlify, Surge, Cloudflare deployment
- **Core Concepts:** Component-Based Architecture, State Management, DOM Manipulation, Form Validation, Responsive/Mobile-First Design

PROJECTS

Customer Support Zone - React, Tailwind CSS, DaisyUI, React Toastify, Vite

[Live Demo](#) | [GitHub Repo](#)

- Built a responsive ticket management app where tickets move through Task Status, In Progress and Resolved stages, with real-time statistics and duplicate-assignment prevention.
- Structured the UI using reusable React components and dynamic JSON-driven rendering, with React Toastify feedback and full mobile responsiveness.

Champions League Dream Team - React, Tailwind CSS, DaisyUI, React Toastify, Vite

[Live Demo](#) | [GitHub Repo](#)

- Developed a fantasy cricket team-builder allowing users to draft a 6-player squad within a virtual coin budget, with live balance updates on every transaction.
- Engineered selection validation logic to block duplicate picks and enforce the team-size limit, with a toggleable Available/Selected view and full responsiveness

Green Earth – Plant Directory & Cart - HTML5, Tailwind CSS, DaisyUI, Vanilla JavaScript, REST API

[Live Demo](#) | [GitHub Repo](#)

- Built an API-driven plant browsing platform that dynamically loads and filters plant data by category from a live external API.
- Implemented a cart system with real-time price calculation, a plant-detail modal, and a loading spinner, using clean, reusable JavaScript patterns.

Emergency Service Directory - HTML5, CSS3, Tailwind CSS, DaisyUI, Vanilla JavaScript

[Live Demo](#) | [GitHub Repo](#)

- Created a hotline directory app with one-click Clipboard API copy, a coin-based mock call simulation, and live call-history logging.
- Built a real-time interaction system where user actions instantly update navbar counters and history logs, using Tailwind's grid/flex utilities.

EDUCATION

International Islamic University Chattogram

B. Sc. in Computer Science & Engineering

CGPA: 3.34 out of 4 | 2019 - 2023

WORK EXPERIENCE

System Engineer- NOC

Bangla Tel Group | Dhaka, Bangladesh | February 2024 to Present

Responsibilities:

- Monitored system performance using Cacti Graph, EMS, and Winbox to ensure high service availability.
- Performed root cause analysis using logs and diagnostic tools to resolve technical issues efficiently.
- Created operational reports and maintained technical documentation for monitoring and audit purposes.
- Collaborated with engineering teams to investigate incidents and support reliable network operations.
